

Quick-Start Guide

PicoDMX

Power Supply

The PicoDMX requires a 12 volt DC power supply. In almost all cases you will just connect the included power supply. However, if the PicoDMX is part of a larger 12 volt system with other controllers it might be neater or easier to borrow the 12 volts from a shared supply. If that's the case, connect it to the trigger terminal block as shown.

Creating Your DMX Animation

① Download and launch Director

Director can be downloaded for free at www.frightideas.com/director

② Create a new show

3 Select the PicoDMX and press Select

5 Select DMX Fixture and press Select

7 Create your animation

You can add additional fixtures, up to a maximum of 10 DMX channels.

9 Insert the SD card into the PicoDMX.

When the red LED stops blinking you can remove the SD card. It may first have to update it's firmware which is a green blink for about 40 seconds.

4 Click the + button

6 Select or create your fixture then press Select twice.

8 Export to an SD card

10 Set your Fixture Address

Set your DMX Fixture to address 2. Use the trigger diagrams on the next page to connect a trigger and test your program.
